

# A MANAGEMENT SOLUTION

## ***THE MILL QUALITY ASSURANCE (QA) PROGRAM FROM ROCK RIVER LABORATORY OFFERS RISK ABATEMENT FOR CONFIDENT MILL MANAGEMENT.***

Working with feed mill managers and agriculture industry experts, Rock River Laboratory constructed the Mill QA Program to answer the industry need for risk abatement solutions and Food Safety and Modernization Act (FSMA) compliance assistance. The Mill Quality Assurance Program provides mill and manufacturing managers:

- Peace of mind*** in consistently controlled and scheduled sampling for liability and risk reduction
- Accurate analysis*** and logical reporting to help keep suppliers in check and control margins
- Organizational scaffolding*** and records to demonstrate hazard assessment, Current Good Management Practices (CGMPs), preventive controls, and quality assurance compliance
- Customer confidence*** in the supplier's commitment to the highest level of quality assurance

The Mill QA program accomplishes all of this through a system of tools that facilitate everything needed to manage sampling and create records:

- The Ingredient Summary Report*** ensures delivery of exact formulations while importing directly into feed software
- Mixer Accuracy Analysis*** tracks the mill mixer's correctness by comparing multiple samples
- Automated Labels*** reduce human error, remove paperwork, and identify samples from start to finish
- Compilation Reports*** identify weekly results, monthly averages and standard deviations, while highlighting results outside the compliance range

Enrolling in the Rock River Laboratory Mill QA Program can help your mill or manufacturing facility track and adhere to Best Manufacturing Practices. Avoid the headaches and worry with a program that manages your feed system accuracy so you don't have to.

Contact Rock River Laboratory today to receive a free Mill QA Program Information Kit, or visit any of the web resources below to learn more:
